## DETAILED ACTION

## Rejections Under 35 U.S.C. § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-16, and 18-24 are rejected under 35 U.S.C. § 102(b) as being clearly anticipated by Brooker(5,798,834).

Brooker teaches an interferometric fiber sensor comprising a laser diode(22) with a current driver(20) which produces both a variable and constant frequency(see figure 5), Michelson fiber interferometer(28), photodetector(82), and processor(18). See figure 1.

FIG.-5

### Rejections Under 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. § 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. § 103(c) and potential 35 U.S.C. § 102(f) or (g) prior art under 35 U.S.C. § 103(a).

Claims 17 and 25 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Brooker(5,798,834).

Official notice is taken that fiber sensors arrays are well known in the art for measuring a plurality of locations along the array. See In re Malcolm, 1942 C.D 589; 543 O.G. 440.

While Brooker fails to teach an array of fiber sensors it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a plurality of sensors forming a fiber array to measure one or more parameters along the fiber array.

*Allowable Subject Matter*

Claims 1-9 are allowed. The prior art of record fails to teach the combination of providing an interferometric fiber sensor, connecting a variable wavelength source, and the two steps of measuring found in claim 1.
